STATISTICS

OF THE

Incidence of Notifiable Infectious Diseases in each Sanitary District in England and Wales during the year 1917.

To the Right Honourable William Hayes Fisher, M.P.
President of the Local Government Board.

SIR,

I HAVE the honour to submit, as in six previous years, the following statistics of cases of notifiable infectious diseases reported during the year 1917.

Description of the Tables.—The statistics are tabulated in order of counties given alphabetically.

The statistics for administrative counties as a whole are shown in the summary table on pp. 12-15, and for county boroughs on pp. 16-17.

The statistics for each county contain information as to the incidence of the chief acute infectious diseases in—

1. The entire administrative county.
2. Each county borough within the geographical county.
3. The aggregate of the boroughs and urban districts situate within the administrative county.
4. The aggregate of the rural districts situate within the administrative county.
5. Each single borough and urban district.
6. Each single rural district.

In the tables the number of cases and the rate per 1,000 of population are given for each of the following diseases:—

Small-pox.
Scarlet Fever.
Diphtheria.
Enteric Fever.
Puerperal Fever.
Erysipelas.

(17254—29.) Wt. 4806—925. 2050. 6/18. D & S. G. 20/ 40. A 2

Cases of typhus fever are shown in footnotes to the county tables.

No cases of cholera occurred during 1917.

There were 8 cases of plague which occurred in the Port of London.

As already stated, case-rates are given for each sanitary area in England and Wales. Many of these districts have very small populations, and in many instances the rate is calculated on one or only a few cases of disease. In this respect the practice of the Registrar-General has been followed. **Although for convenience of reference such rates have been given, it is evident that in judging of their significance reference should always be made to the population and to the number of cases of sickness on which each rate is based.**

It is unnecessary to labour the point that the epidemiological and administrative value of the rates set out in the tables in this return steadily increases as it becomes possible to compare a longer series of years.

Cases of Sickness among Sailors and Soldiers.—Section 5 (*b*) of the Local Government (Emergency Provisions) Act, 1916, provides that the Medical Officer of Health of a local authority shall receive notifications of all cases of infectious diseases arising in barracks, camps, &c., in the occupation of His Majesty's forces. The numbers thus notified are stated separately in Table I. on pp. 14-15, for England and Wales as a whole, but the figures given for each county and sanitary area do not include military and naval cases.

Sickness Statistics for 1917.—During 1917, the total number of cases of the chief notifiable diseases in England and Wales, excluding cases among sailors and soldiers, was as follows:—

Disease.	England and Wales, 1917.	
	No. of cases notified.	Rate per 1,000 of population.
Tuberculosis, (pulmonary)	73,654	2·18
„ (other forms)	22,096	0·66
Small-pox	7	0·00
Typhus Fever	4	0·00
Scarlet Fever	48,817	1·45
Diphtheria	43,315	1·28
Enteric Fever	4,601	0·14
Continued Fever	58	0·00
Relapsing Fever	3	0·00
Puerperal Fever	1,345	0·04
Erysipelas	13,325	0·40
Cerebro-Spinal Fever...	1,465	0·04
Poliomyelitis	357	0·01
Cholera...	—	—
Plague	8	0·00
Ophthalmia Neonatorum	6,716	10·05*
Measles and German Measles	533,833	15·84

* Rate per 1,000 births.

Of the above, the following cases, being chiefly cases of imported disease, were notified to port sanitary authorities:—

Small-pox, 1; Scarlet Fever, 32; Diphtheria, 41; Enteric Fever, 96; Puerperal Fever, 1; Erysipelas, 26; Continued Fever, 8; Pulmonary Tuberculosis, 116; Tuberculosis (other forms), 55; Cerebro-Spinal Fever, 3; Ophthalmia Neonatorum, 4; Measles and German Measles, 453; Plague 8.

Seasonal Incidence.—The following table shows the seasonal incidence of scarlet fever, diphtheria, enteric fever, cerebro-spinal fever, poliomyelitis, and measles during 1917. The actual average weekly number of cases is given at the base of each column. The proportion of the notifications to this average taken as 100 is shown for each week, any special seasonal excess of 30 per cent. over the mean for the whole year being shown by black type.

Small-pox.—In England and Wales, only 7 cases of small-pox were notified, as compared with 149 in 1916, 90 in 1915, 65 in 1914, 115 in 1913, 123 in 1912, and 295 in 1911. These figures include in the earlier years some cases notified which subsequently proved not to be small-pox.

Two cases were notified in the City and 1 in the Port of Liverpool, 1 case in Bangor, 1 in Grays, 1 in Smethwick, and 1 in Wortley Rural District. In the two latter cases the diagnosis was open to some suspicion.

Typhus Fever.—Only 4 cases of typhus fever were notified, as compared with 4 in 1916, 45 in 1915, 15 in 1914, 18 in 1913, 31 in 1912, and 65 in 1911. These figures include some cases notified which subsequently proved not to be typhus. The cases were notified from Stepney, Liverpool, Manchester and Rhondda respectively. The case notified from Rhondda was probably one of measles.

Other Infectious Diseases.—Of *Scarlet Fever* 48,817 cases were notified, as compared with 75,722 in 1916; of *Diphtheria* 43,315 cases, as compared with 51,707 in 1916; of *Enteric Fever* 4,601 cases, as compared with 5,564 in 1916; of *Puerperal Fever* 1,345 cases, as compared with 1,996 in 1916; of *Erysipelas* 13,325 cases, as compared with 18,510 in 1916; of *Cerebro-Spinal Fever* 1,465 cases, as compared with 1,306 in 1916; 2,566 in 1915; 315 in 1914, and 305 in 1913. The distribution of the cases of cerebro-spinal fever is shown in the following table:—

—	London.	County Boroughs.	Boroughs and Urban Districts.	Rural Districts.	Port Sanitary Districts.	Total.
England	380	428	417	208	3	1,436
Wales (including Monmouth) ...	—	8	17	4	—	29
Total ...	380	436	434	212	3	1,465

357 cases of *Poliomyelitis* were notified, as compared with 689 in 1916, 517 in 1915, 509 in 1914, and 729 in 1913. The distribution of the cases is shown in the following table:—

—	London.	County Boroughs.	Boroughs and Urban Districts.	Rural Districts.	Port Sanitary Districts.	Total.
England	53	98	121	76	—	348
Wales (including Monmouth) ...	—	4	4	1	—	9
Total ...	53	102	125	77	—	357

Measles.—By order dated 27 November, 1915, the Board made regulations requiring the notification of cases of measles and German measles to the Medical Officer of Health by medical practitioners and by parents and guardians or other persons in charge of the patient. The order came into force on the 1st January, 1916. The weekly statements of notified infectious

disease from which this annual return is compiled do not distinguish between notified cases of measles and German measles, nor between notifications by medical practitioners and by parents and guardians. A detailed tabulation of the returns received has therefore not been made for each sanitary area. The total number of notifications of measles and German measles in England and Wales during 1917 was 533,833. The seasonal incidence is shown in the table on page 6.

Ophthalmia Neonatorum.—During 1917 6,716 cases of ophthalmia neonatorum were notified, as compared with 7,613 in 1916 and 6,806 in 1915.

Tuberculosis.—The incidence of pulmonary and of other forms of tuberculosis since these diseases became compulsorily notifiable throughout England and Wales is shown in the following table. For reasons given on pages xcix-ci of my Annual Report for 1913-14, it has not been considered advisable to give statistics for smaller areas than those enumerated in the tables on pp. 12-17. The tables in question and the general table below include a considerable number of duplicate notifications, the number of these varying greatly in different areas. The number of such duplicate notifications is particularly large in London. The rates given below must be considered in the light of these facts.

—	Pulmonary Tuberculosis.

I am again indebted to Dr. Stevenson, of the General Register Office, for arranging for the calculation of the rates given in the following tables. The civil populations given in the first column of the tables have been estimated in the General Register Office.

I am, Sir,

Your obedient Servant,

ARTHUR NEWSHOLME,

Medical Officer.

May, 1918.

TABLE

* These parishes are administered by the Rural District Council of Shifnal (Salop).

† The remaining part of the Rural District of Tamworth is in the Administrative County of Warwick.

‡ On the 1st April, 1917, the Borough of Stafford was extended so as to include portions of the Rural District of Stafford. Allowance has been made in the calculation of rates. Estimated upon revised data, the population of the Rural District is found to be 7,923, and this estimate has been taken into account in the calculation of rates.

NOTIFICATIONS OF INFECTIOUS DISEASE AND ATTACK-RATES, 1917—*continued.*
